

ASTRONOMY at CENTENNIAL

When you are a new student to Centennial, get yourself ready to take ASTRONOMY!

Mr. Strobel has been teaching Astronomy at Centennial for a few years, and is ready for you to come and learn EVERYTHING you can about space and the universe!

Visit some of these links to get yourself ready to learn

Visit this link to see the rocket that will take you to MARS!!

<https://www.spacex.com/vehicles/starship/>

We start the year at the beginning of time and work our way to galaxies, the solar system, our sun and then we look for ALIEN life in the galaxy!

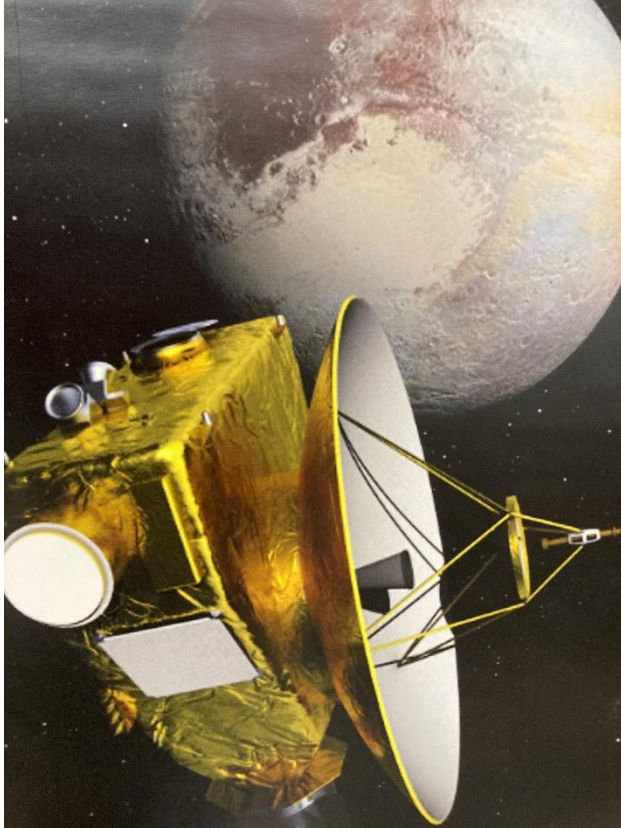

OUR NEIGHBORHOOD

The Planetarium is ready for you to come and visit!

We are so lucky to have the planetarium in our school, this is where we can go into the night during the day! We have several very good presentations that will help your understanding of the content and concepts we learn in Astronomy.

MISSION TO PLUTO AND BEYOND!

There are hundreds of missions in space right now and many more in the future! Did you know there is a robot getting ready to land on MARS?!

And there are a few pounds of asteroid rocks on there way back to Earth?

Nasa and SpaceX are planning on sending people to the moon and the on to the planet Mars, you could be one of the lucky astronauts if you really work hard!

Were going back here soon!
