South High School Vision:

To ensure that all students cultivate a deep sense of academic and social responsibility, thereby preparing them to be strong, productive citizens.

To ensure that this happens, the South High School Science Department strives to ensure that all students have access to instruction in all Colorado Academic Science Standards. Each of the following suggested schedules ensures that this occurs.

For students planning to attend a 4 year college:

Available to 8th grade students with A or B in middle school science and/or middle school science teacher recommendation.

Begin with Biology 1 as freshmen.

Must complete AP Environmental Science by the end of their junior year.

For students planning to attend a vocational or trade school:

Follow either schedule depending on your area of interest. Preparation for a science based career or trade may require more advanced science classes.
